

SC1000-ZIP

Excels in energy efficiency

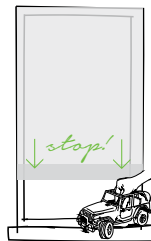

Up to 140 km/h*

ENERGY-CONSCIOUS, MODERN STYLING

Completely concealed in the cavity wall, and without perforating the building shell... The SC1000-ZIP is the screen of choice for passive construction and energy-neutral living. When closed, the bottom lath disappears completely into the screen box. That delivers a sleek look and excellent protection for your fabric against wind and weather. Year after year, the SC1000-ZIP allows you to enjoy shade and avoid excessive temperatures in the house.

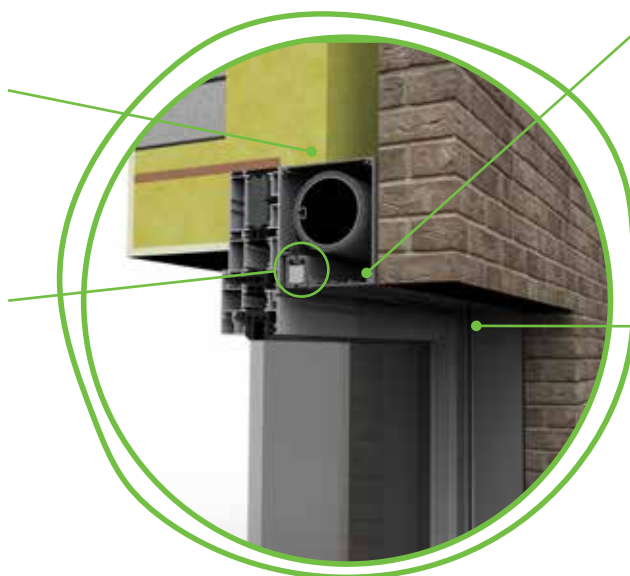

Your safety is our priority!

- Superior obstacle detection: If the screen encounters an obstacle, it will stop automatically. This is how we promote the safety of your family and how we protect the screen from unnecessary damage.
- Smart obstacle detection: The screen recognises the difference between an obstacle and a gust of wind. Very handy.

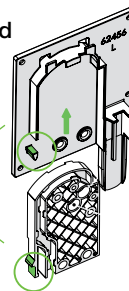

Unique features

- 1 Can be completely concealed in the cavity wall, no need for perforations to the building shell - ideal for passive construction and energy-neutral living
- 2 When rolled down, the bottom lath disappears into the screen box – completely invisible. This provides better protection of the fabric against wind and weather and adds a stylish look to the unit

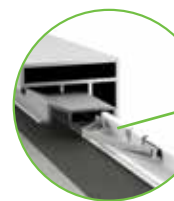

- 3 Easy installation with the Click and Lock system

"Click & Lock"

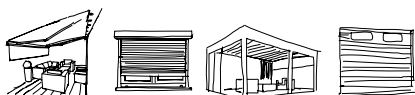

- 4 Enjoy many years of ultra-taut fabrics, thanks to the innovative zip system

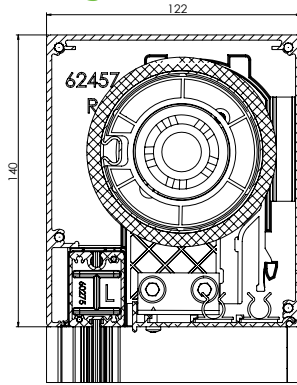

Extremely durable stainless steel spring

* Test results according to CSTC running at constant pressure of up to 1000 Pa > 140 km/h* and an average dimension of 3.5 x 3 m.
